

Air Quality Monitoring and Sampling Summary Report

Air Quality Monitoring of the Work Zone Perimeter, Localized Weather Patterns

DWR Oroville Dam Recovery

August 11 thru August 24, 2017

Prepared For:

California Department of Water Resources

1416 9th Street

Sacramento, California 95814

Prepared By:

Safety Management Systems, LLC

West Coast Operations – Industrial Hygiene Group

4100 Easton Drive, Suite 7

Bakersfield, CA 93309

Air Quality Monitoring and Sampling Summary Report

August 11 thru August 24, 2017

Approved by:

Date: September 8, 2017

Michael Donlon, P.E., CSP

Department of Water Resources

Chief Safety Officer

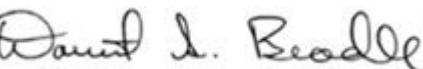

Date: September 8, 2017

Michael Parreira

Department of Water Resources

Associate Safety Engineer

Compiled by:

Summary

The work site air monitoring activities were stable during this time period and no additional monitoring stations were added. None of the established stations were modified, or moved.

Air quality monitoring at all of the perimeter monitoring stations were continuous throughout the time period with few interruptions as noted in this report. All sampling methodology adhered to established protocols and there were no changes or modifications to test methodology. All of the work stations were inspected daily as part of the established quality control protocols.

The air monitoring equipment is inspected throughout the sampling episodes to ensure proper operation and to assess the site conditions which may impact sample results. We experienced zero (0) storms during this time period. None (0) of the air quality samples were analyzed “for reference only” because of minor equipment failure or loss of power during this monitoring period.

The equipment in the field continues to perform well and meets the sampling design for flow rates, volumes, and dependability for the CARB Modified AHERA methodology. Sample 0824-OFD-TPT-16 demonstrated a post flow calibration shift which exceeded 5% increase/decrease; for this samples, the volumes were calculated using the lower of the values to produce a more conservative structure concentration.

The majority of the asbestos structure counts at the perimeter remain predominantly “None Detected”:

- Total number of samples: 420
- Total number of samples that were “None Detected”: 299 (71%)
- Total number of samples where asbestos was detected but did not exceed the action level: 116 (28%)
- Total number of samples that exceeded the action level: 5 (1%)
- Total number of samples that were archived: 0
- Total number of samples that were “Overloaded”: 0

Actinolite (amphibole) and Chrysotile (serpentine) asbestos structures are being detected in several of the samples. The Action Level of 0.0050 S/cc was met or exceeded five (5) times during this sampling time frame triggering investigations into possible cause and corrective actions. Non-asbestos structures are detectable and noted in the sample summary and in the laboratory reports and include a contribution from non-regulated amphiboles.

Dry weather and diminishing soil moisture conditions require the continual application of water and dust mitigation techniques to maintain low structure and dust levels at the perimeter of the work zone.

1.0 Sample Locations

Sample locations are established and/or moved in cooperation and with advanced approval by Butte County Air Quality Management District (BCAQMD). The sites that have been selected best represents the quality of the air as it leaves the “outer work zone perimeter”. Additionally, the locations are chosen based on alignment with “sensitive receptors”.

Sensitive receptors include, but are not limited to, hospitals, schools, daycare facilities, elderly housing and convalescent facilities. These are areas where the occupants are more susceptible to the adverse effects of exposure to toxic chemicals, pesticides, and other pollutants. Extra care must be taken when dealing with contaminants and pollutants in close proximity to areas recognized as sensitive receptors.

Table 1 Dust and Asbestos Structure Monitoring Station Locations

Station	Location	Way Point ID	Latitude	Longitude
1	Intake Yard	WP 246	39°32'5.44"N	121°28'29.37"W
2	Upper Overlook Entry	WP 247	39°31'51.40"N	121°28'36.65"W

2.0 Sample Time/Rates/Volume

Air monitoring Sample data is the crux of the monitoring program at the Oroville Dam project and strict quality assurance procedures are practiced.

The sampling strategy dictates that two (2) twelve (12) +/- hour samples are collected each day, representing a continuous history of dust and asbestos structures that are experienced at the work zone perimeter.

The following tables show the critical information that is collected on each sample and is provided for evaluation of the thoroughness and accuracy of air sampling episodes.

The headings of the tables are explained below:

- Sample Date – Date that the sample was started.
- Sample Number – A specific and unique alpha-numeric numbering system to identify and track each individual sample throughout the journey from collection, sample shipping preparation and Chain of Custody through the laboratory analysis and finally to the report.
- Chain of Custody (COC) – In order to use the results of a sampling program as evidence, a written record must be available listing the location of the samples at all times. This is also an important component of good laboratory practices. The COC record is necessary to make a *prima facie* showing the integrity of the samples. The samples should be handled only by persons associated in some way with the monitoring program.
- Pre-flow Rate (L/min) – The pre-flow rate (liter/minute) is measured using a NIST traceable Primary Standard. Pumps are allowed a warm-up period according to manufactures specifications.
- Post-flow Rate (L/min) – The post-flow rate (liter/minute) is measured using a NIST traceable Primary Standard at the end of the sampling cycle.
- Avg (liter/min) – The average flow rate (liter/minute) is calculated by averaging the pre and post flow rates.
- Time On – Sample Start Time in hours and minutes.
- Time Off – Sample Stop Time in hours and minutes.
- Day/Night Shift – Identifies the portion of the day when this sample was collected.
- Total Minutes – Based on the difference, in minutes, between the start and stop time that the sample was collected.
- Sample Volume (Liters) – is calculated by using the total minutes samples multiplied by the average flow rate.

Table 2 Perimeter – Upper Overlook Sample Time/Rates/Volume

3.0 Sampling Media and Target Analysis

Dust Monitoring Sample Methods

TSI DustTrak DRX 8533

The DustTrak DRX Aerosol Monitors are laser photometers that simultaneously measure mass and size fraction. These monitors are continuous, real-time, 90° light-scattering laser photometers that simultaneously measure size-segregated mass fraction concentration corresponding to PM_{2.5}, PM₁₀, and Total PM size fraction. They combine both particle cloud (total area of scattered light) and single particle detection to achieve mass fraction measurements. This size-segregated mass fraction measurement technique is superior to either a basic photometer or optical counter (OPC). It delivers the mass concentration of a photometer and the size resolution of an OPC.

- Photometers can be used at high mass concentration, but they do not give any size information and significantly underestimate large particle mass concentrations.
- OPC's provide size and count information; however, they do not provide any mass concentration information and cannot be used in high mass concentration environments.

TrakPro software shall be utilized for exposure studies and environmental dust monitoring. TrakProTM Data Analysis Software is a Microsoft Windows®-based software program that works with a variety of TSI data logging instruments. This software helps pre-program instruments, store and organize test data, and generate detailed graphs and reports needed to effectively communicate results.

Perimeter Air Sample Methods – CARB Modified TEM

Analysis of all air samples shall follow the analytical method specified by the United States Environmental Protection Agency, Asbestos Hazard Emergency Response ACT (AHERA) criteria for asbestos (40 CFR, Part 763 Subpart E, Appendix A, adopted October 30, 1987), with the following exceptions CARB Modified TEM:

- The analytical sensitivity shall be 0.001 structures per cubic centimeter (0.001 s/cc); and
- All asbestos structures with an aspect ratio greater than three to one (3 to 1) shall be counted irrespective of length.

The results of the analysis of air samples shall be reported as transmission electron microscopy (TEM) asbestos structures per cubic centimeter (s/cc).

DWR Oroville Dam Air Quality Monitoring Sampling an Analysis Summary Report
August 11, 2017 through August 24, 2017

The method requires the use of TEM 25 mm air sampling cassettes, designed and manufactured to meet all applicable NIOSH, OSHA, and EPA standards.

Sampling media for perimeter sampling shall comply with the following:

- 0.45 μm pore size, Mixed Cellulose Esther (MCE) Filter Material
- 5.0 μm Filter is placed under the 0.45 μm filter as a diffuser
- 2" Static Conductive Extension Cowl
- Meets AHERA Requirements Asbestos TEM 25 mm 0.45 μm Cassette-Individual

4.0 Photo Documentation

Table 6 Photo Documentation of Air Monitoring Stations and Weather Stations – Current Condition

 A photograph of an air monitoring station at Station 1. It consists of a white tripod-mounted control unit with a small blue solar panel attached to its side, positioned on a dirt surface. In the background, there is a chain-link fence, some trees, and a large body of water (Oroville Lake) under a clear sky. The date "08/19/2017 10:11" is visible in the bottom right corner of the image.	 A photograph of an air monitoring station at Station 2. It features a white tripod-mounted control unit with a larger blue solar panel mounted on top, situated on a dirt area near a paved road. A chain-link fence runs along the background. The date "08/19/2017 09:59" is visible in the bottom right corner.
Station 1 – WP 246 Intake Yard	Station 2 – WP 247 Upper Overlook Entry
 A photograph of an air monitoring station at Station 3. It is located on a paved area next to a large blue circular object, possibly a spool or drum. The station includes a white tripod-mounted control unit with a blue solar panel. Orange traffic cones are placed around the equipment. The date "08/19/2017 09:56" is visible in the bottom right corner.	 A photograph of an air monitoring station at Station 4. It is set up on a grassy, uneven terrain with trees in the background. The station has a white tripod-mounted control unit with a blue solar panel. The date "08/19/2017 09:56" is visible in the bottom right corner.
Station 3 – WP 248 Upper Overlook	Station 4 – WP 249 Canyon Drive

DWR Oroville Dam Air Quality Monitoring Sampling an Analysis Summary Report
August 11, 2017 through August 24, 2017

 A white rectangular air quality monitoring unit mounted on a tripod stands in a grassy area near a body of water. A solar panel lies on the ground to its left. The date '08/19/2017 16:57' is visible in the bottom right corner of the image.	 A white rectangular air quality monitoring unit mounted on a tripod stands in a dry, grassy field. A solar panel lies on the ground to its left. The date '08/19/2017 15:03' is visible in the bottom right corner of the image.
Station 9 – 017A Burma Road	Station 10 – WP 281 Cherokee Rd.
 A white rectangular air quality monitoring unit mounted on a tripod stands on a paved surface in a parking lot. A solar panel lies on the ground to its left. The date '08/19/2017 14:15' is visible in the bottom right corner of the image.	 A white rectangular air quality monitoring unit mounted on a tripod stands in a grassy field. A solar panel lies on the ground to its right. The date '08/19/2017 13:49' is visible in the bottom right corner of the image.
Station 11 – WP 009A Launch Ramp Parking	Station 12 – WP 010A Launch Ramp Turnaround

DWR Oroville Dam Air Quality Monitoring Sampling an Analysis Summary Report
August 11, 2017 through August 24, 2017

 08/19/2017 10:30	 08/20/2017 13:38
Station 13 – WP 019A E. Diversion Dam (PENDING APPROVAL)	Station 14 – WP 020A SE Canal (PENDING APPROVAL)
 08/17/2017 10:40	
Station 15 – WP 021A SW Canal (PENDING APPROVAL)	

DWR Oroville Dam Air Quality Monitoring Sampling an Analysis Summary Report
August 11, 2017 through August 24, 2017

 A photograph of Weather Station #1 (WP 045A) located at Oroville Dam. The station is mounted on a tall black pole. In the background, there is a paved area with a red circular structure, a trash can, and a small signpost. The date and time '08/19/2017 16:20' are overlaid at the bottom of the image.	 A photograph of Weather Station #2 (WP 044A) located in a field. The station is mounted on a tall black pole. The background shows a hillside covered in dry grass and rocks. The date and time '08/19/2017 16:18' are overlaid at the bottom of the image.
Weather Station #1 – WP 045A	Weather Station #2 – WP 044A

5.0 Air Sampling Equipment Malfunctions & Corrective Actions

Table 7 – Equipment Failures

EQUIPMENT	DATE/TIME	EXCEPTION	REMEDY
DM10	08/13/2017 1830 hrs	WP281 Station 10 Cherokee Road Dust Trak stopped at 1830hrs to 8/14/17 at 0700 hrs. Night QC did not recognize unit not operating. This affected data for 8/13/17 PM shift and 8/14/17 AM shift during those time frames. Technician checked and said during sample change out he failed to hit start button after QC.	Night QC was coached in what to do to ensure units are operating during QC
DM12	08/14/2017 0225 hrs	Zero calibration was performed and unit in operation again. Night QC did not recognize unit not operating. Unit was not operating until 8/14/2017 0622 hrs.	Night QC was coached in what to do to ensure units are operating during QC.
DM21	08/17/2017 1654 hrs	At night QC first check, IH Tech found Dust Trak not running. Data collection restarted 8/17/17 2121 hrs.	Night QC started the Dust Trak.
DM14	08/21/2017 2057 hrs	WP020A Station 14 SE Canal Dust Trak experienced internal pump failure. Review of Dust Data indicates that the internal pump became nonoperational on 8/21 at 2057 hrs to 8/22 at 0842 hrs.	Dust Trak was replaced on 8/22 at 0842 hrs.
DM08	08/22/2017 0135 hrs	Field Technician discovered Dust Trak at WP277 SW Diversion Dam not running during PM sample change out. Both the internal DT batteries and the external 12V battery were dead. Environet Data indicates that the monitor was not running until 08/23 0539 hrs.	Batteries were replaced and issue was resolved.
Air Sampling Pump	08/24/2017 0319 hrs	WP281 Cherokee Rd's asbestos pump was discovered off during the PM sample change out on the morning of 8/25. The pump history shows it flow faulting at 0319. The pump was not running	The pump history was used to determine the time it shut off and calculate total minutes of run time. Faulty pump was replaced and removed from field for evaluation.

DWR Oroville Dam Air Quality Monitoring Sampling an Analysis Summary Report
August 11, 2017 through August 24, 2017

EQUIPMENT	DATE/TIME	EXCEPTION	REMEDY
SKC Pump	08/11/2017 09:59 hrs	Sample ID 0811-OFD-PMT-07. SKC pump was not running at first QC.	Pump was swapped and the pump history was used to calculate the total minutes from both pumps added.
SKC Pump	08/21/2017 0242 hrs	Sample ID 0821-OFD-PMT-05. Intake pump flow fault.	Pump was replaced. total run time from both pumps was 684 minutes. Original pump start & stop times were 1736/0242. Replacement pump start & stop times were 0318/0536. Lowest flow rate was used as default average.
SKC Pump	08/23/2017 0248 hrs	Sample ID: 0823-OFD-PMT-05. Pump was not operating at QC2.	Pump was replaced. Total run time for both pumps 542 minutes

Table 8 – Sample Failure

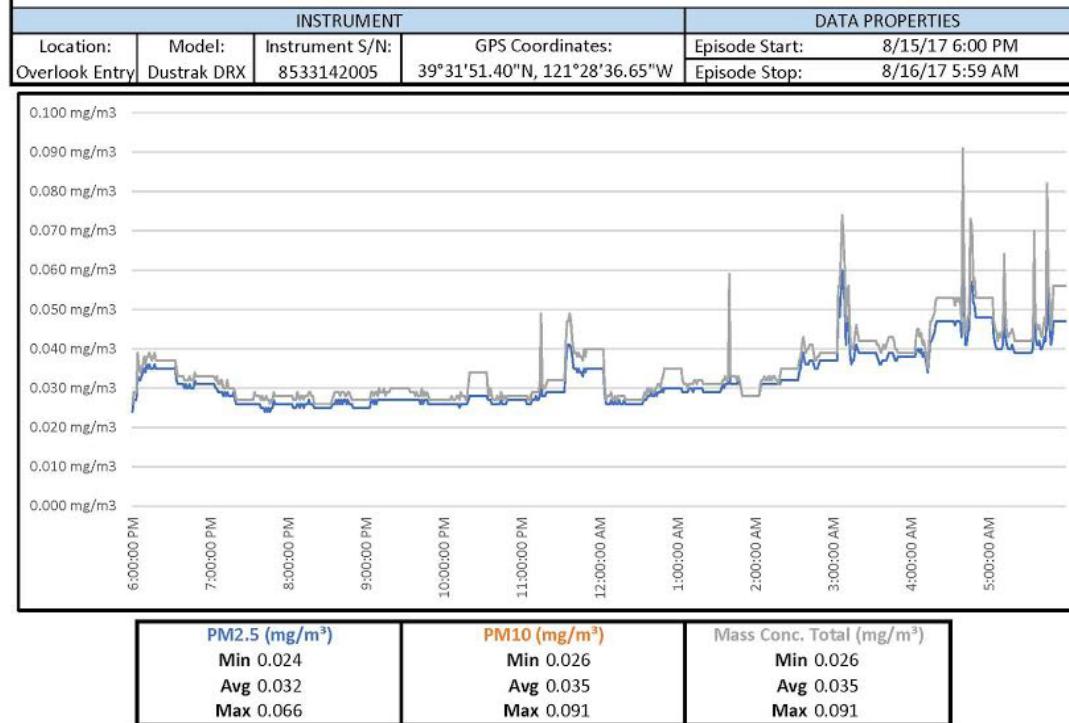

Date	Sample ID	Discussion
There were no asbestos perimeter sample failures for this time period.

7.0 Laboratory Analysis Summary

Copies of the Laboratory reports are included as Appendix A – Laboratory

Table Heading Explanations

Zone	A designation of area of the work zone.
Sample ID	An alpha-numeric identified, unique to a particular sample.
Location	A description of the location where the sample was collected, often accompanied by a way point.
Non – Asbestos Structures	Non-asbestos minerals that have fibrous morphology and aspect ratio of 3:1, irrespective of length.
Asbestos Type	Regulated asbestos forms of the following minerals: chrysotile (fibrous serpentine), crocidolite (fibrous riebeckite), amosite (fibrous cummingtonite—grunerite), fibrous tremolite, fibrous actinolite, and fibrous anthophyllite.
Structure	A microscopic bundle, cluster, fiber, or matrix which may contain asbestos ranked by aspect ratio of 3:1 and length.
Analytical Sensitivity	The analytical sensitivity is defined as the concentration that would result from the finding of one fiber or structure. The higher the total volume of air pulled through the filter and the more filter area analyzed the lower the analytical sensitivity. The target analytical sensitivity for this method is 0.001 structures per cc of air (s/cc).
Asbestos Concentration	The asbestos concentration in structures per cc (S/cc) is equal to the analytical sensitivity for that sample multiplied by the number of asbestos structures identified. BCAQMD has approved the DWR Community Action Level at the Perimeter of the Oroville Dam property of 0.005 regulated asbestos structures/cubic centimeter (S/cc) of air.

August 11, 2017 through August 24, 2017

Zone	Sample ID	Location	Non-Asbestos Structures	Asbestos Type	# Structures		Analytical Sensitivity (S/cc)	Asbestos Concentration (S/cc)					
					$\geq 0.5\mu\text{m}$ < $5\mu\text{m}$	$\geq 5\mu\text{m}$							
					Total for all types.....						0.0019		
Non-asbestos structures reported include a contribution from non-regulated amphiboles.													

8.0 Perimeter Dust Monitoring Summary

The dust monitoring data is compiled in twelve (12) hour increments for day/night shifts. Information is logged for PM10, PM2.5, and Total Dust.

Particle pollution includes:

PM10: inhalable particles, with diameters that are generally 10 micrometers and smaller; and

PM2.5: fine inhalable particles, with diameters that are generally 2.5 micrometers and smaller.

Total inhalable dust is the fraction of airborne material which enters the nose and mouth during breathing and is therefore liable to deposition anywhere in the respiratory tract. The particle sizes of total inhalable dust are up to 100 microns.

Perimeter dust levels for this time period were unremarkable, with intermittent spikes due to wind gust. There were no citable episodes of “visible emissions” at the work zone perimeter.

Dust results are presented in Appendix B.
